

Stretched canvas

Short description:	Superior canvas prints designed for trade and retail				
Long description:	<p>Each custom stretched canvas is printed using UVgel print technology for vibrant, UV-resistant colour. We then make a custom wooden frame from European knotless pine - in any size needed up to a maximum of 3 metres - and stretch the rolled canvas print over it.</p> <p>The canvas is then hand finished by our experienced framing team, who ensure each corner fold is perfectly smooth and tight.</p> <p>Each canvas frame is milled with a curved profile; minimising contact with the face of the canvas; preventing unsightly impression marks and surface cracking.</p> <p>We use finger jointed canvas frames to create corner tension which helps to resist warping. For larger sizes, we add wooden 'wedges' to each corner; ensuring the canvas surface remains taut and allowing for easy re-stretching in future years.</p>
